

Lab 3 - Evidence Checklist

Build a Parent Page with Automatic Page Numbering | LO1 | TGS-2021007827 | v13.0

File Control

- ☐ I kept HP_LongDoc.indd unchanged.
- ☐ I saved my completed native file as Lab-03-Completed.indd.
- ☐ All linked assets are inside this lab folder or its subfolders.
- ☐ The file opens without an unexpected missing-font or missing-link alert.

Required Evidence

- ☐ Updated HP_LongDoc.indd
- ☐ Pages panel screenshot
- ☐ Inserted-page numbering proof

Acceptance Gate

- ☐ Every page carries a correct, automatically generated folio; after inserting two pages the numbering is still correct end to end; the outer margin measures 18 mm and content has re-flowed to respect it.
- ☐ I checked for overset text, hidden objects, unintended RGB/spot colours and output settings as relevant to this lab.
- ☐ My screenshots show the full application panel and enough page context for a trainer to verify the result.

Learner Reflection

What was the most important production decision in this lab?

What would you check first if the file failed at handoff?
