

Lab 10 - Evidence Checklist

Build a Colour System with Swatches, Spot Colours and Gradients | LO2 | TGS-2021007827 | v13.0

File Control

- ☐ I kept HP_Magazine_3.indd unchanged.
- ☐ I saved my completed native file as Lab-10-Completed.indd.
- ☐ All linked assets are inside this lab folder or its subfolders.
- ☐ The file opens without an unexpected missing-font or missing-link alert.

Required Evidence

- ☐ Updated HP_Magazine_3.indd
- ☐ Swatches panel screenshot
- ☐ Separations or colour-space check

Acceptance Gate

- ☐ Separations Preview lists exactly five plates - CMYK plus PANTONE 212 C - the Swatches panel contains only named swatches with no RGB icons, and the divider rectangle carries a saved gradient swatch.
- ☐ I checked for overset text, hidden objects, unintended RGB/spot colours and output settings as relevant to this lab.
- ☐ My screenshots show the full application panel and enough page context for a trainer to verify the result.

Learner Reflection

What was the most important production decision in this lab?

What would you check first if the file failed at handoff?
